Webmedx Leader Receives AHDI Award for Credentialing Efforts in Medical Transcription

Moore's dedication to study groups guides clinical documentation professionals towards certification.

Nashville, TN (August 2, 2009): [Webmedx](#), the fourth largest medical transcription service provider in the U.S., proudly announces that Tammy Moore, CMT, AHDI-F, QA Mentoring Team Manager and Education Coordinator, has received the annual Excellence in Credentialing Award from the Association for Healthcare Documentation Integrity, [AHDI](#). Given to those within the clinical documentation industry whose efforts elevate the value of medical transcriptionists (MTs) within healthcare, the award represents Moore's third consecutive tribute for her dedication to professional credentialing.

"Medical transcription is the most complete and meaningful representation of a patient's encounter and as such, is a key component of quality patient care and reimbursement," states Moore. Through the support and encouragement of her study groups, over 100 clinical documentation professionals have earned their certified or registered MT credential. The company encourages all employees to obtain credentials and proudly supports Moore's efforts.

Moore began her study groups in 2005 as a way to facilitate credentialing within the profession and mentor others. As each group concludes, new facilitators are named and new groups started. "My favorite thing about the study groups is being able to work with other MTs and see them reach their professional goals," concludes Moore. By obtaining their credential, MTs receive AHDI's stamp-of-approval for quality and a tangible sign of their expert knowledge and skills in clinical documentation.

"MTs receive patient information in the form of a narrative description or speech-recognized document directly from the physician," mentions [Sean Carroll, CEO, Webmedx](#). "As such, they are healthcare's first line-of-defense against documentation errors and serve as important advocates for accurate, complete and meaningful information," he concludes. Furthermore, medical transcription is the preferred, fastest and most comprehensive way for physicians to document encounters. With new capabilities to provide discrete, reportable content, medical transcription is taking center stage in the healthcare industry's push towards automation—and accuracy.

About Webmedx

Webmedx, Inc. is the premier supplier of medical documentation services for hospitals and clinics nationally. The company designs and implements customer-centric documentation solutions using the most credentialed domestic workforce in the industry and its own enterprise-class, intelligent speech recognition and content management technology platforms to deliver the highest-quality clinical documentation possible supporting patient care and safety.###
